THE COMMUNICATIONS SOLUTION

FOUNDED IN 1994 TO PROVIDE EXCELLENCE IN THE DESIGN, MANUFACTURE, SERVICE AND MAINTENANCE OF WIRELESS COMMUNICATIONS PRODUCTS

Datanet provides product service and support for paging and network operators and service providers, both within the commercial and emergency service sectors.

Our high level of technical service and knowledge enables us to provide excellent in-house customer support for all existing and new products that we sell. Our technical expertise and experience allows us to maintain products to individual component level, of the highest quality.

New service levels created for emergency services are our 'Priority' maintenance facility. The fast turnaround response incorporating a freepost return system (Station>Datanet>Station), guarantees minimum disruption.

Tremendously received by many brigades is our revolutionary 2A emergency services alerter, which offers welcome functionality and simple user friendliness. The 2A is proving to be so popular that several brigades are already in the process of replacing their current alerters.

Because the 2A is designed and manufactured by us, we are grateful for the valuable support of several brigades who were able to provide useful contributions in terms of its design. Our tailor-made alerter demonstrates our solid commitment to providing a first class service to our valued customers.

Its flexible features are fully programmable by the system integrator/programmer which enables the 2A to be 100% compatible with all existing mobilising systems (whatever their current configuration).

From the users perspective, its super bright LED's provide instant call type recognition. And its very loud modulating tone cadences and combined integral vibrating alert, penetrate the most difficult of environments.

For our many and varied existing customers, we always try to provide a complete choice of alerters. For example, we continue to fully supply and support our PN6001 and PA8002 firefighter's alerter and officers pager respectively.

We are also proud of our unique InfoLink 12A paging data receiver. Designed by us, it carries point to point and broadcast data and messaging for a variety of applications including, control room display messaging via LED display systems.

So, for the future, Datanet are set to continue to use the most sensible technologies to deliver professional quality products.
